

Used Forklift Parts

Used Forklift Parts - Unavoidably, forklift components would eventually wear out and require replacing. The choice of buying new parts could become costly so one more idea is to obtain used components. This can save much money eventually. It is a great idea to purchase used lift truck components that have been remanufactured. These parts would guarantee that you are getting parts that will work for a long time and be productive.

Remanufacturing broken and worn out components is a more cost effective way overall than rebuilding. With rebuilding components, only the components that are broken or worn out get replaced, which means that other wearable parts could break down soon after purchase.

Remanufacturing however offers the best assurance for second-hand parts. Reproduced components are taken apart and cleaned and then all wearable pieces are replaced. All wearable parts are replaced regardless of age or wear which is another reason why reproduced parts generally operate so much better. Any part within the part is brand new and this provides far longer life to the second-hand part. Depending on the forklift parts that are being redone, the cleaning process and the whole remanufacturing process will differ.

After complete disassembly, the engines are oven cleaned. Various components of the engine such as rings, pistons, spark plugs, valves, valve springs, and filters could be replaced during the remanufacture process. The engines are hot tested after reassembly to ensure that there are no oil pressure problems, no leaks, noises or any vacuum.

Transmissions are disassembled, oven cleaned and pressure washed. A thorough inspection is done to be able to check for any cracks. Seals, bearings and bushings are all replaced. Normally, the replacement components utilized on transmission parts meet OEM specifications.

Certain parts such as torque converters, the alternator, the water pump, the starter and steer axles can obtain longer serviceability after being reproduced and having all wearable components replaced. The electronic control in the electric forklift is maintained by the control card. This card can also be reproduced with replacing all aged and worn out components. Not like various forklift parts the control card can only have the worn and aged components replaced.

Remanufactured parts are thoroughly examined upon reassembly to ensure they are in top condition before being sold. It is vital when purchasing reproduced components to be certain they have undergone the proper testing and inspection procedures. On certain bigger components like steer axles, engines and transmissions, OEM specification replacement parts should be used.

The dealer of used lift trucks and parts can ensure that the reproduced components have met OEM specifications and that these parts meet industry standards. Lots of details go into remanufacturing used parts. This attention to detail provides more serviceability out of reproduced components than the components that were simply rebuilt.
