

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings which are used on lift masts to be able to help them perform within difficult environmental conditions. Lift masts are often subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is often exposed to environmental influences like cold, heat, dust, contamination, aggressive ambient air and moisture. Therefore, the lift masts' guidance arrangements should be particularly strong and have a certain high load carrying capability.

Carriage rollers have been developed as the answer for functioning in various environmental surroundings. These bearings are the solution where the guidance arrangements of the lift masts need to be economical and maintain operational security while having the capability to handle a particularly high load carrying capacity.
