

Toyota Forklift Parts

Toyota Forklift Parts - In the U.S., Toyota Materials Handling inc., or TMHU, has been the best selling lift truck supplier since 1992. This business has been situated out of Irvine, California for well over 40 years, providing a complete line of quality lift trucks. With an impressive reputation of stability and reliability, Toyota lift trucks have thrived in the competitive materials handling market. Quality is the foundation of Toyota's notorious Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, situated in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S.A are built here.

Every one of Toyota's manufacturing plants within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its devotion to continuous progress and its environmentally friendly systems. It is the first and only maker to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For example, the Toyota 8-Series IC lift trucks emit 70% fewer smog forming emissions than the existing centralized EPA standards and have complied with California's strict emission standards and regulations.

TMHU, U.S.A.- Leading the Industry

The head of Toyota Material Handling, U.S.A., Brett Wood believes that TMHU's success comes from its dedication to produce high quality lift vehicles at the same time as offering exceptional client assistance and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues."• TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's biggest lift truck dealer and is amongst the magazines celebrated World's Most Admired Companies.

New Meaning to Environmental Accountability

Toyota Industries Corporation, as the parent company, has instilled a rich corporate doctrine of environmental stewardship in Toyota. Not many other companies and no other lift truck producer can equal Toyota's record of protecting the environment while simultaneously advancing the economy. Environmental accountability is a fundamental feature of corporate decision making at Toyota and they are proud to be the first and only manufacturer to provide UL-listed, EPA- and CARB-certified Compressed Natural Gas powered lift trucks. Yet another reason they remain a leader within the industry.

Toyota first released the 8-Series line of lift vehicles in 2006, again exhibiting its leadership and innovation in the industry. Featuring an exclusive emission system that eclipsed both Federal EPA emission standards, and California's more environmentally friendly emission standards. The finished creation is a lift truck that produces 70 percent fewer smog forming emissions than the current Federal standards allow.

Also in 2006, Toyota established a partnership with the Arbor Day Foundation, furthering their commitment to the environment. In excess of 57,000 trees have been planted in district parks and national forests damaged by natural causes such as fires, as a product of this partnership. 10,500 seedlings have also been scattered through Toyota Industrial Equipment's network of dealers to non-profit organizations and neighborhood consumers to help sustain communities all over the U.S.

Toyota's lift trucks provide improved productivity, visibility, ergonomics and durability, and most importantly, the industry's leading safety technology. The company's System of Active Stability, often known as "SAS"•, helps lessen the risk of mishaps and injuries, and increasing productivity levels while minimizing the potential for product and equipment damage.

System Active Stability senses many elements that could lead to lateral volatility and possible lateral overturn. When any of those conditions are detected, SAS instantly engages the Swing Lock Cylinder to stabilize the rear axle. This adjusts the lift truck's stability footprint from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the likelihood of a mishap from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also helps to avoid injuries or accidents while adding stability.

The SAS systems were originally used on the 7-Series internal combustion lift vehicles which were put on the market in 1999. These systems helped drive Toyota into the lead for industry safety standards. Now, SAS is used on practically every new internal combustion products and is standard equipment for the new 8-Series. There are more than 100,000 SAS-equipped lift vehicles in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with compulsory operator training, overturn fatalities across all models have decreased by 13.6% since 1999. Also, there have been an overall 35.5% fall in industry wide collisions, loss of control, falls and overturn from a lift truck for the same period.

Toyota's uncompromising principles reach far beyond the technology itself. The company believes in providing general Operator Safety Training courses to help customers meet and exceed OSHA standard 1910.178. Training courses, video tutorials and an assortment of resources, covering a broad scope of subjects-from personal safety, to OSHA regulations, to surface and load conditions, are available through the vendor network.

Ever since the sale of its first lift truck in the U.S. to the construction of its 350,000th lift truck produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has sustained an unbroken existence in the U.S. This fact is demonstrated by the statistic that 99% of Toyota lift trucks sold in America now are built in the United States.

TMHU is situated in Columbus Indiana and houses nearly 1 million square feet of production facilities over 126 acres of property.

Facilities include a National Customer Center, as well as production operations and supply centers for equipment and service parts, with the whole investment exceeding \$113 million dollars.

The new National Customer Center was conceived to serve both dealers and customers of TMHU. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an area for live product demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its creator, Sakichi Toyoda, in 1867, and lastly a instruction center.

TMHU has 68 official industrial equipment dealers, along with 189 dealership locations all through the United States, offering the most comprehensive and inclusive customer support and customer service in the industry. The company's new and Licensed Used lift vehicles, service, parts, and financing capabilities make Toyota dealerships a one-stop shop to guarantee total client satisfaction.
